WEATHER OF CONCERN

Weather of Concern

- The National Weather Service is predicting Santa Ana winds will bring hot, dry weather through Wednesday with record setting high temperatures for portions of Southern California.
 - The duration, strength, and widespread nature of this Santa Ana wind event, combined with the extreme heat and very dry fuels, will bring the most dangerous fire weather conditions that southwest California has not seen in the past few years.
 - If fire ignition occurs, there will be the potential for very rapid fire spread, long range spotting, and extreme fire behavior.
- Critical Fire Weather conditions will exist for southwest California mountainous areas and portions of the Central Coast due to gusty winds, very warm and dry conditions with poor overnight relative humidity recovery.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

***** Gusty N to NE winds will continue into Tuesday. *****

***** Very dry and unseasonably warm weather through the weekend *****

High pressure has moved into Northern California and conditions will be warm and dry through the coming weekend. There will be a sharp warming trend today with afternoon highs about 10 degrees warmer than the Sunday pushing most areas to 10-20 degrees above normal. The warmth will hold for a few days with our warmest inland areas mostly around 90. RH will also be on the decrease with somewhat poor to moderate relative humidity (RH) overnight recovery (30-50%). Slightly cooler conditions are expected Thursday through the weekend with the warmest areas cooling down into the lower 80s, but afternoon RH will remain low (10-20%) and some areas will see better overnight recovery. Relatively light to locally moderate gusty N to NE/offshore winds will continue into Tuesday for areas from the Cascade/Sierra crest westward to some coastal locations. The windiest spots will likely see peak gusts around 30-35 mph at times, but these locations will be rather isolated. Most of the windy places will see peak gusts of 25-30 mph. The wind will help lower the RH as well. Lighter NW to NE winds are expected the rest of the week through the weekend with the strongest winds Thursday.

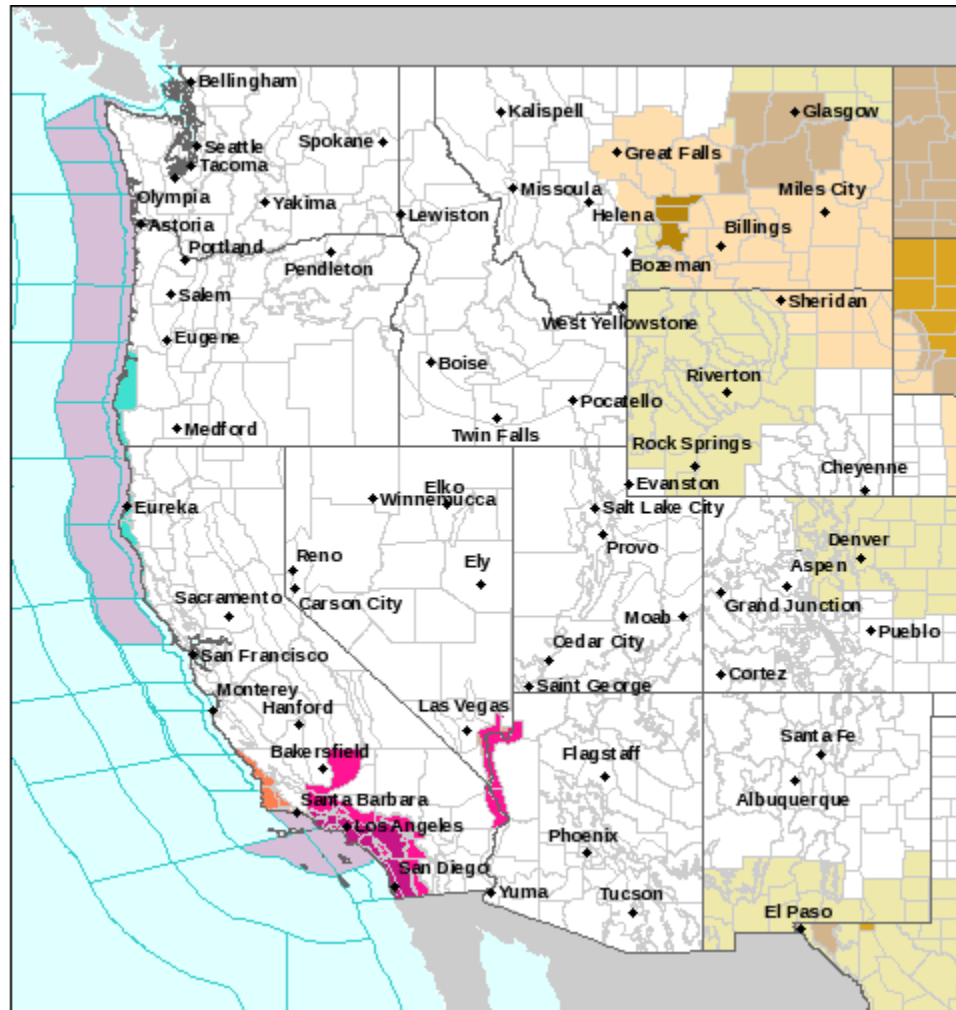

SOUTHERN CALIFORNIA

Surface high pressure over the Great Basin will bring northeast to east winds of 15 to 30 mph with gusts to 50 mph to the mountains and below the canyons and passes of Southern California through Tuesday afternoon.

Winds will decrease starting Tuesday evening and become light by Wednesday afternoon. Very strong high pressure aloft will bring record heat through Tuesday, with 70s to low 80s across the mountains, mid 80s to mid 90s in the Central California valleys, and upper 90s to 105 in the Southern California valleys. Cooling will take place starting Wednesday as the ridge aloft weakens a little, but temperatures will stay well above normal through this weekend. Minimum humidity will be in the single digits and teens and humidity recovery at night will be poor away from the coast through this weekend.
